ABSTRACT OF THE DISCLOSURE

A method for optimizing at least one property of a satellite system. The system has a satellite provided with a transmitter for transmitting a satellite signal that represents data. The satellite further has a satellite
5 receiver for receiving the satellite signal. The method involves receiving the satellite signal, via the satellite receiver; determining the data from the satellite signal so received; checking the data for data errors; and changing the at least one property of the satellite system if a
10 result of the checking satisfies a predetermined criterion.
